

Wednesday, September 18
7:00 p.m.
Hawthorne Hill Nature Center
Refreshments will be served.

The **Tyler Creek Water Shed Coalition (TCWC)** is having its annual meeting on Wednesday, September 18, 2019 at 7 pm. Our program for the evening is, **Stream Water Quality as Determined by Indicator Species**. Our speaker will be **Pam Otto**, naturalist for the St Charles Park District.

The **TCWC** is a 501(c)3 Scientific and Educational, not for profit corporation, that monitors the conditions and water quality in the Tyler Creek Watershed. Monthly samples of creek water are collected in 7 locations in Elgin and checked for several characteristics such as dissolved O₂, coliform bacteria, turbidity, etc. These are tests for the **chemical and physical** qualities of the creek water. The September program will show how a **biological** measurement can be used to judge the water quality of a stream.
This program is free and open to the public.
